as one of the most complexly divisive periods in american history reconstruction has been the subject of a rich scholarship historians have studied the period s racial views political maneuverings divisions between labor and capital debates about woman suffrage and of course its struggle between freed slaves and their former masters yet on each of these fronts scholarship has attended overwhelmingly to the eastern united states especially the south thereby neglecting important transnational linkages this volume the first of its kind will examine reconstruction s global connections and contexts in ways that while honoring the field s accomplishments move it beyond its southern focus the volume will bring together prominent and emerging scholars to showcase the deepening interplay between scholarships on reconstruction and on america s place in world history through these essays reconstruction in a globalizing world will engage two dynamic fields of study to the benefit of them both by demonstrating that the south and the eastern united states were connected to other parts of the globe in complex and important ways the volume will challenge scholars of reconstruction to look outwards likewise examining these same connections will compel transnationally minded scholars to reconsider reconstruction as a pivotal era in the shaping of the united states relations with the rest of the world

this volume is the first comprehensive overview of roman experimental archaeology exploring its key themes methodologies and applications through a diverse array of international case studies experiments simulations and reconstructions are important methods for understanding the past from uncovering how ancient objects and structures were made used destroyed deposited and affected underground to illuminating the experiences of tasting ancient foods fighting alongside comrades or living in replicated structures although the incorporation of experimentation has had great success in prehistoric studies greater reliance on the wealth of literary and material sources remaining from the classical period has meant that its potential for roman studies has yet to be fully realised the 26 chapters in this book are divided into 5 thematic parts each of which opens with a contextualizing introduction that frames the detailed case studies found in individual chapters and showcases the actual and potential diversity of experimentation as applied to the roman past by scholars re enactors and practitioners in the heritage sector in laying out a detailed guide to roman experimental archaeology the volume as a whole maps its past present and future and provides a firm foundation for further practical

research and collaboration in doing so it reasserts that experiments and reconstructions are a significant resource for testing or developing theories rather than merely artistic replicas and that the vast amount of quantifiable data they yield can be invaluable in support of interpretations of relevant archaeological or historical evidence regardless of the period in question and beyond the confines of academia

from the preeminent historian of reconstruction new york times book review an updated abridged edition of reconstruction the prize winning classic work on the post civil war period which shaped modern america reconstruction chronicles the way in which americans black and white responded to the unprecedented changes unleashed by the war and the end of slavery it addresses the quest of emancipated slaves searching for economic autonomy and equal citizenship and describes the remodeling of southern society the evolution of racial attitudes and patterns of race relations and the emergence of a national state possessing vastly expanded authority and one committed for a time to the principle of equal rights for all americans this masterful treatment of one of the most complex periods of american history new republic remains the standard work on the wrenching post civil war period an era whose legacy still reverberates in the united states today

complex disorders including obesity diabetes fatty liver disease cardiovascular disease and cancer are results from a combination of genetic environmental and lifestyle factors the prevalence of such disorders has increased dramatically in the last two decades and there is an urgent need for the development of new prognostic tools for the treatment of such diseases however this requires a deep understanding of the underlying molecular mechanisms involved in the occurrence of the diseases with the advances in high throughput technologies biological components of cells can be measured with a very high resolution and these data can be used for investigating whole systems properties using a network based approach systems medicine provides an integrative platform for studying the interactions between the biological components of the cell using a holistic approach and generating mechanistic explanations for the emergent systems properties this inter disciplinary field of study allows for understanding biological processes of cells in health and disease states gaining new insights into what drives the appearance of the disease and finally identifying proteins and metabolites implicated in human disease systems medicine utilizes mathematical approaches to generate models which can be employed for designing new sets of experiments and for mapping the response of the system to perturbations quantitatively these models as well as the developed tools can accelerate the emergence of personalized medicine which can transform the practice of medicine and offer better targets for drug development with minimum side effects
