this volume contains the proceedings of the conference on harmonic analysis and related areas the conference provided an opportunity for researchers and students to exchange ideas and report on progress in this large and central field of modern mathematics the volume is suitable for graduate students and research mathematicians interested in harmonic analysis and related areas

this book is a comprehensive introduction to the mathematical theory of vorticity and incompressible flow ranging from elementary introductory material to current research topics while the contents center on mathematical theory many parts of the book showcase the interaction between rigorous mathematical theory numerical asymptotic and qualitative simplified modeling and physical phenomena the first half forms an introductory graduate course on vorticity and incompressible flow the second half comprise a modern applied mathematics graduate course on the weak solution theory for incompressible flow

the book constructs explicitly the fundamental solution of the sub laplacian operator for a family of model domains in \mathbb{C}^n 1 this type of domain is a good point wise model for a cauchy rieman cr manifold with diagonalizable levi form qualitative results for such operators have been studied extensively but exact formulas are difficult to derive exact formulas are closely related to the underlying geometry and lead to equations of classical types such as hypergeometric equations and whittaker s equations

this book s subject lies in the nexus of partial differential equations operator theory and complex analysis the spectral analysis of the complex laplacian and the compactness of the $\bar{\partial}$ neumann operator are primary topics the revised 2nd edition explores updates to schrödinger operators with magnetic fields and connections to the segal bargmann space fock space to quantum mechanics and the uncertainty principle

this book provides a descriptive account of mischa cotlar s work along with a complete bibliography of his mathematical books and papers it examines the harmonic analysis and operator theory in relation with the theory of partial differential equations

princeton university s elias stein was the first mathematician to see the profound interconnections that tie classical fourier analysis to several complex variables and representation theory his fundamental contributions include the kunze stein phenomenon the construction of new representations the stein interpolation theorem the idea of a restriction theorem for the fourier transform and the theory of h^p spaces in several variables through his great discoveries through books that have set the highest standard for mathematical exposition and through his influence on his many collaborators and students stein has changed mathematics drawing inspiration from stein s contributions to harmonic analysis and related topics this volume gathers papers from internationally renowned mathematicians many of whom have been stein s students the book also includes expository papers on stein s work and its influence the contributors are jean bourgain luis caffarelli michael christ guy david charles fefferman alexandru d ionescu david jerison carlos kenig sergiu klainerman loredana lanzani sanghyuk lee lionel levine akos magyar detlef müller camil muscalu alexander nagel d h phong malabika pramanik andrew s raich fulvio ricci keith m rogers andreas seeger scott sheffield luis silvestre christopher d sogge jacob sturm terence tao christoph thiele stephen wainger and steven zelditch

this volume is the proceedings of the ams ims siam joint summer research conference on microlocal analysis and its applications to partial differential equations held July 10-16, 1983 in Boulder, Colorado. It contains refereed articles which were delivered at the conference: two of the papers are survey articles, one on uniqueness and non-uniqueness in the Cauchy problem and one on hypoanalytic structures; the rest are either detailed announcements or complete papers covering such areas as spectrum of operators, nonlinear problems, asymptotics, pseudodifferential operators of multiple characteristics, and operators on groups and homogeneous spaces. The volume should be useful to active mathematicians and graduate students working on linear and nonlinear partial differential equations and related areas.
